Face to face

Anna is a 33-year-old professional with two young children. She has never been happy with her thin cheeks, worrying they made her face look too long. So she turned to MBNS for a simple, lasting solution.

“I have always felt that my face was too thin,” says Anna. “During pregnancy I was so pleased with the extra weight I put on around my cheeks. Unfortunately, it didn’t last. After I had my children, my face returned to its longish and thinnish normal. I swim and exercise a lot, so when my hair is wet my face appears even more elongated. All I wanted was just some volume and depth to my cheeks. That’s why I decided on a treatment as the only realistic option.

“I did my homework beforehand. I searched the internet and spoke to friends who had already undergone various non- surgical procedures. I knew that finding a clinic with a good reputation was of paramount importance. Luckily, I was referred by a friend to the nursing specialists at MBNS. They have over fifteen years experience and are the number one clinic in Oxfordshire and surrounding areas for the treatment of fillers.

“The welcome at MBNS was as warm as I could have hoped for. I discussed my situation with Marea Brennan Thorns, a senior partner at MBNS, and she suggested that the best way to achieve the look I wanted was to be treated with Evolence, a collagen product which would be injected into both cheeks and the little furrow in my nose. To my delight, the treatment has given me a healthy, natural look. It has made such a difference to the way I feel about myself. It is only slight but I just love the effect.”

March 2007 saw the launch of EVOLENCE™, a new injectable collagen-based treatment that is safe, natural and capable of smoothing out facial lines and wrinkles as well as restoring volume and plumpness to the skin. People who want to revitalise their appearance and bring back the structure of much younger skin can now choose a solution

that doesn’t need costly repeat treatments every few months. EVOLENCE™ has an excellent safety profile and breaks down naturally over time, just like the body’s own collagen.

EVOLENCE™ is injected into the skin by a trained health professional using a fine needle syringe. The material is injected where the body’s own collagen has been weakened.

Through its patented GLYMATRIX™ Technology, EVOLENCE™ extends the natural and immediate benefits of collagen for at least 12 months – with no pre-testing required. It’s no surprise, then, that over 96% of patients surveyed were satisfied or very satisfied with the results.

If you would like more information about this and other treatments offered at MBNS Clinic, you can visit their website at www.mbnsclinic.co.uk, or alternatively phone them to book a consultation on 01844 213007 or email at info@mbnsclinic.co.uk
