

Smile, you're on the Canfield Camera!

Have you ever wished that someone would buy you a really inspirational gift? You know, something that could really change the way you felt about yourself; something that could make a noticeable improvement to your skin and help you look younger?

A gift that means you too could have access to the type of facial improving treatments that are seen on the likes of the Ten Years Younger and Gok Wan TV makeover shows? Well, the answer is right here in Thame!

MBNS in North Street is a medical aesthetics clinic, led by specialist nurses who are able to diagnose ageing skin and prescribe treatments which actually change the structure of your skin. They have some exciting new treatments and products that have “perfect Christmas present” written all over them for your family, your friends and you too.

This leading clinic has recently introduced a Skin Diagnostic Camera (the Visia Canfield Camera – as seen on the recent Gok Wan TV show Miss Naked Beauty). This state-of-the-art

camera really does provide an excellent insight into your skin care. What's more, the MBNS team can pinpoint a treatment or skin-healthcare plan that is specially designed just for you.

What the camera can reveal is astonishing. Most of us have suffered some form of sun damage, whether it is pigmentation patches, red veins or lines and wrinkles; the camera detects and analyses the superficial layers of the skin as well as the deep layers.

But here's the real benefit. In treating what the camera reveals, the MBNS

< The skin is analysed in many different ways

Products such as the Obagi System, Jan Marini Skin Care range, and the full IS Clinical range of serums, allow them to clear acne lesions

and improve acne scarring, restore and maintain skin health, correct sun damage and stimulate skin cell renewal,

nurses are able to use stronger cosmeceutical skin care products that simply aren't available on the High Street, as well as treatments such as IPL (Intense Pulse Light) laser, chemical peels, the Fire and Ice Medical Facial, and frown relaxing injections and dermal fillers.

To make use of this innovative camera system, MBNS are inviting you to come along to the clinic for a free skin and photo consultation!

The analysis takes less than five minutes, capturing the left, front and right side of the face – that's up to eight separate analyses of your skin, which our nurse specialists will then review with you to establish what treatment will best work for you to help keep you feeling and looking rejuvenated.

The complexion analysis system is used by MBNS as an essential part of their clients' annual skin assessment. It also gives you a look into your skin's future and allows our nurse specialists to advise on the best treatment for you.
